RükTECH Piston & Bearing Coatings

RükTECH introduces its Race Proven Piston and Bearing coatings. Are you doing a rebuild or building a High Performance Engine? It could be a sled, ATV, Import, V6, V8, or Top Fuel Car we don't care, but we have the coating you need for internal protection and performance. RükTECH Piston and Bearing coatings are proven to make your motor run stronger and for longer. Rük piston and bearing coating are what you need to decrease friction and Heat (wear & Tear), Increase lubricity, and ultimately create more power. By coating the piston skirts and bearings you remove the metal to metal contact that is creating the damaging wear and tear on these components and increasing the life and performance. If you decrease friction and heat from these parts you will create more horsepower for you application. These coatings are widely used by engine builders of all kinds because of the lasting benefits. RükTECH piston and bearing coatings work hand in hand with RükSPEED Oil to give you the ultimate internal performance package. Call today to see how RükTECH Piston and Bearing coatings and RükSPEED Oil will make your engine the best on the street, track, or anywhere.

Benefits of RükTECH Piston and Bearing Coating:

- Great for Rebuilds on any motor including Snowmobiles, Motorcycles, ATV's, Cars, Trucks, Race Motors, etc.
- Race Proven to extend the life of your engine components, this includes pistons, bearings, cams, valve springs, etc.
- Perfect for Race motors looking for an edge in performance
- Increases Component Life by Reducing Friction
- Highly recommended for Turbo or Supercharged cars
- Reduces Internal component temperatures
- Reduce piston scuffing due to cold weather startups
- Performance and efficiency gains over non-coated parts
- Will work on New and Used Pistons (Only New Bearings)
- Works Hand in Hand with RuKSPEED Oil & Fluids for Maximum Performance
- Peace of mind that your engines internals are protected and performing at their peak.

Parts You Coat with RükTECH Piston and Bearing Coatings:

- Piston Skirts (Solid Dry Film) and Piston Crowns (Thermal Barrier)
- New Bearings (used bearings cannot be coated)
- Cam Shafts
- Valve Springs and Stems
- Connecting Rods
- Exhaust Chambers and Ports
- Inside on pistons to increase oil shedding.
